

Supporting Member States to address hydrological challenges, extremes and water scarcity.

Project ID 2210221032

The IPCC's Sixth Assessment Report (2021) highlights that the rapid melting of the Cryosphere (snow, glacier, permafrost and ice) is one of the most visible impacts of climate change in the world. Furthermore, during the past 20 years, the two main water-related disasters, floods and droughts caused more than 166,000 deaths and affected another three billion people globally. By 2050, desertification alone will threaten the livelihoods of nearly one billion people in about 100 countries. Along the line of IHP IX priority areas: at least 5 member states, of which 2 in Africa and 1 SIDS and including 3 basins will be provided with scientific tools and methodologies to address hydrological and cryosphere challenges, hydrological extremes water scarcity and sediment transport and management.

Project contributes to

Contribution to UNESCO Results Framework 2022-2025

Sector: Natural sciences

Outcome 3 - Enhance knowledge for climate action, biodiversity, water and ocean management, and disaster risk reduction

Output: 3.SC2 - Water science, innovation, education, management, cooperation and governance bolstered for a water secure world in a changing environment

Intersectoral

Outcome 3 - Enhance knowledge for climate action, biodiversity, water and ocean management, and disaster risk reduction

Output: 3.IP2 - Environmental education strengthened to equip learners to address global environmental challenges

Contribution to Sustainable Development Goals
